

Best Operating Practice at JVSL - Pellet Plant

J.P.N. Lal; D.L. Saralaya; Gururaj Prasad

Abstract

JVSL is an integrated steel plant equipped with high-end iron making technology called COREX. JVSL Pellet Plant is unique one in this world using low calorific value fuel-corex gas and producing quality pellets for internal consumption and export. The iron ore available in the region is basically a high gangue content. Pelletising with which is a gargantuan task. We at JVSL have mastered the technology to harness the high gangue content ore to produce quality pellets adopting some of the best operating practices.
